

6 out of **10** people
said their mental health improved¹

8 out of **10** people
said they felt better about the future¹

What could being free of Hep C mean for you?

No injections, since treatment involves taking tablets daily for 8–12 weeks.²

124 people with a history of injecting drugs took part in a face-to-face survey about how completing a course of tablets to treat their hepatitis C made a difference to them. They were asked how they feel about themselves, their physical health, and their place in the community.*

Be Free of Hep C

Get tested. Get treated. Get cured.

95%

of people with hepatitis C get cured by treatment³

73%

of people said they felt better about themselves¹
